

Environment policy

With a vision focused on the ecological transition, REALCO is committed to complying with all applicable environmental laws, regulations and standards related to its activities.

We aspire to go beyond these legal requirements by adopting more stringent environmental practices and standards to continuously improve our environmental performance, wherever possible, and in line with our values.

As part of our commitment to offering a healthy range of products and services, and to federating circular and decarbonized hygiene, we undertake to :

- Support the objectives of the Paris Agreement to limit the increase in the planet's average temperature to below 2°C (target 1.5°C) by optimizing our energy consumption and purchasing.
- Encourage sustainable water use through the use of rainwater and reduce its pollution in order to protect and improve the aquatic environment.
- Optimize waste management on our site and with our partners; promote waste reduction, reuse, recovery, recycling and recovery.
- Analyze environmental risks and opportunities and integrate them into decisions concerning our operations and our innovation process.
- Train, sensitize and mobilize our teammates and stakeholders to ensure their support in implementing our environmental policy.
- Maintain a double seat for the environment on our Vision Committee.

Management is committed to allocating the necessary resources for the implementation of the Environmental Management System so that REALCO can achieve its vision
